## NEW automatic conveyor from Spee-Dee is easy to clean and guarantees fast changeovers

Do you fill powders into rigid containers like jars and bottles? Are you looking for a cohesive system that is easy to clean and change over? You may be interested in our new automatic conveyor. It's been integrated with our 3600 auger filler to fill the containers automatically. This cost-effective solution is perfect for most dry fill packaging operations.

The free-standing, unified design has a single base with no legs to make cleaning easier. The unit has a single HMI with an electrical enclosure. To maximize efficiency, an inline or offline checkweigh system can be cohesively integrated to ensure accurate weight measurement.

A single stand holds both the conveyor and the drive head. A rectangular column provides added strength and durability. Changeovers and maintenance are quick and easy thanks to an adjustable height column. Adding a split hopper can further simplify these procedures.

For nearly 40 years, CPGs, contract packagers and OEMs have received the best possible filling systems thanks to our fast, clean and safe equipment. **For more information on the new conveyor or 3600 auger filler, please contact**

**your Spee-Dee sales representative or call 262-886-4402.**

## NOW IS THE PERFECT TIME TO BEGIN YOUR 2018 SPARE PARTS PLANNING

An effective maintenance program includes developing a well thought out replacement parts inventory. Having the right parts on hand can save hours and, sometimes, days

or weeks in costly downtime.

### Consider the following when planning:

**Restoration** – Some spare parts need to be replaced as part of your planned maintenance program. Wear parts like bearings and seals should be on your checklist, but remember longer wearing items like the clutches on rotary fillers.

**Lead Time** – Because they're produced by order, tooling can take weeks to order. To keep your operation running smoothly, you might consider stocking those items that could cause catastrophic downtime if they ever failed.

**Phase Outs** – Finding spare parts for an older machine can be difficult. If you have an older generation machine, see if any parts are planned to be phased out soon. You can choose to either upgrade those components, or add them to your spare parts inventory.

Talk with your Spee-Dee account rep about creating a proactive, long range maintenance plan to help ensure the availability of your machines and boost the value of their output.
